

POLYSAAS

THE AI-POWERED ORCHESTRATION LAYER FOR
ENTERPRISE OPEN-SOURCE SAAS STACKS

SEEKING BRIDGE RAISE VIA SAFE MARCH 2026

MICHAEL OLIVER FOUNDER & LEAD ARCHITECT

The Problem

- MID-MARKET AND ENTERPRISE TEAMS FACE SaaS SPRAWL
- OPEN-SOURCE TOOLS RUN IN SILOS REQUIRING MANUAL SYNCs
- THIS CAUSES INTEGRATION DEBT AND EXPENSIVE CUSTOM DEVELOPMENT
- USERS RARELY CODE APIS LEADING TO VENDOR LOCK-IN

The Problem

This causes a gap between the needs of the SaaS subscribers and the capabilities of the SaaS providers.

Customization gap after implementing multiple SaaS applications:

- Vendors charge \$50K+ for bespoke integrations
- APIs exist but 87% of users never code them
- Result: high churn, lost productivity, vendor lock-in

Opportunity:

Slice of \$375B+ SaaS market shifting to open-source + self-hosted (data sovereignty, AI privacy)

Visualize the Solution

[1]

- CUSTOMIZATION GAP AFTER SAAS ADOPTION
- VENDORS CHARGE HIGH FEES FOR CUSTOM INSTANCES
- MOST USERS DO NOT CODE AVAILABLE APIs
- THIS LEADS TO VENDOR LOCK-IN AND HIGH CHURN
- POLYSAAS FILLS THE CUSTOMIZATION GAP EASILY

Visualize the Solution

- POLYSAAS FILLS THE CUSTOMIZATION GAP EASILY
- VISUALIZE THE UNIFIED NO-CODE ORCHESTRATION LAYER SOLUTION
- VENDORS CHARGE HIGH FEES FOR CUSTOM SOFTWARE INSTANCES
- MOST SAAS USERS DO NOT CODE EVEN WHEN APIs ARE AVAILABLE AND OFTEN THEY ARE NOT
- HIGH CHURN AND VENDOR LOCK-IN ARE KEY OUTCOMES

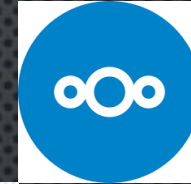

The Solution

- PolySaaS = unified no-code orchestration layer
- Apps as Peers (no hierarchy)
- AI as Peers (Grok, Gemini integrated in MatterMost)
- Atomic Services: event-driven, real-time workflows across apps
- PolySniffer: passive zero-code integration discovery
- Multi-tenant microservices on GCP/Kubernetes, unified SSO & billing
- One login, one dashboard, one bill → eliminate sprawl, automate flows

Bundled Enterprise-Grade Apps (All Peers)

- Odoo – ERP & CRM
- Nextcloud – Secure files & collaboration
- Mattermost – Real-time messaging + AI peers
- WordPress – Content management
- Liferay – Enterprise portal
- Dolibarr – Modular ERP & invoicing
- Monitor Logger – Advanced logging
- PolySysMon – Performance & health monitoring

Instant provisioning on signup – start with one app or unlock full suite plus any external SaaS

How It Works

- Tenant signs up → instant multi-app provisioning
- Atomic Services trigger on events (create in Odoo → auto-folder in Nextcloud → notify in Mattermost)
- AI peers join Mattermost chats: reason, draft, automate, analyze
- PolySniffer discovers APIs passively → enables no-code connections
- Unified dashboard + OpenAPI + webhooks for extensibility
- Real-time, event-driven, no vendor code changes

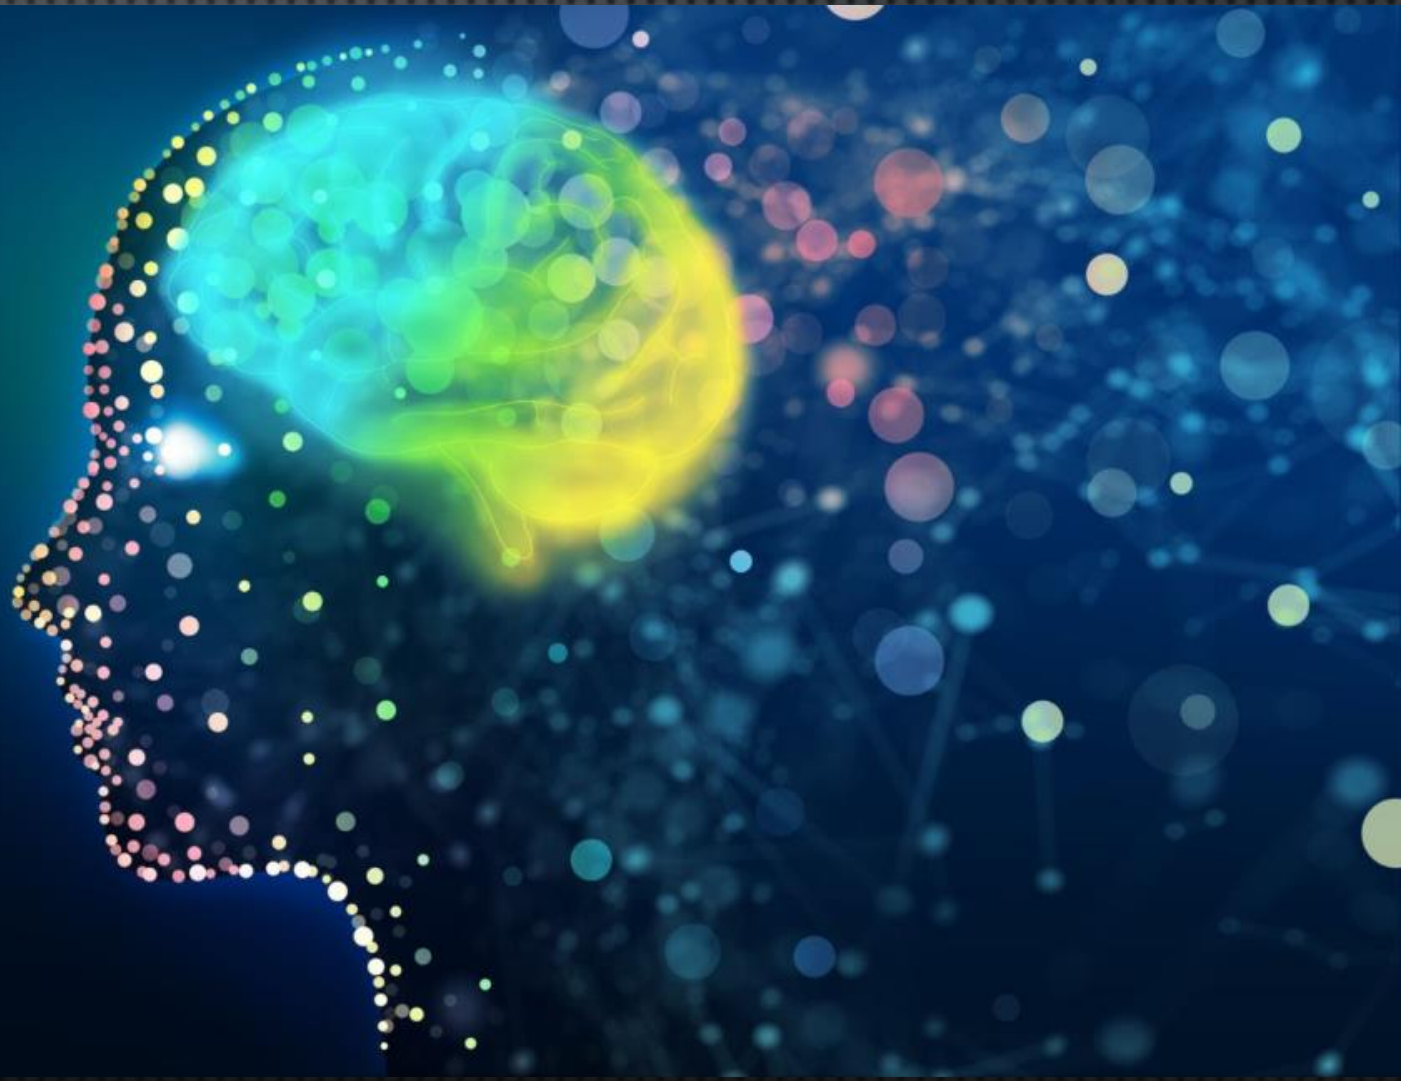

Machine Learning Studio

Create your own private datasets and apply machine learning to enable Artificial Intelligence without risk.

Your data remains private and isolated while the PolySaaS Dynamic Orchestration can merge public AI models with your own private data for a truly safe and effective use of AI.

Be it company private data, or individual private data such as medical records, the PolySaas Online Machine Learning Studio is the perfect solution.

Available on the platform in Q2 2026

Traction

- Growing waitlist of qualified SMBs & enterprises (50–500 seats)
- Signed LOIs signaling strong ARR path post-launch
- MVP live: real-time event-driven flows, Atomic Services executing cross-app automations
- OpenAPI docs available
- Advisors:
 - Feyzi Fatehi
 - John Shackleton
 - Francis Uy
 - Scott Chate

Market Opportunity

- Global SaaS revenue \$428B+ (2025), growing 15–20% YoY
- Self-hosted / private cloud ~\$20B → \$46B by 2033 (data sovereignty demand)
- Customization middleware slice: \$7–10B addressable
- Competitive Edge
 - PolySaaS vs alternatives: no host code change, AI flow capture, per-tenant UX, vendor white-label, \$29+/mo vs \$50K+ custom instances

Business Model

- Tiered subscriptions, high gross margins
- Starter: \$29/mo/user – 1 app
- Team: \$49/mo/user – 3 apps
- Unlimited: \$99/mo/user – full suite + orchestration & AI peers
- LTV potential \$18K+, CAC target low via channels & organic

The Ask

- Small bridge round via YC-style SAFE
- Valuation Cap: \$5M post-money
- Discount: 20% to next priced round
- Minimum check: \$2,000–\$10,000 (flexible for close circle)

Use of Funds:

- 40% – Public MVP polish & GCP/Kubernetes scaling
- 30% – GTM (Product Hunt, partnerships, channels)
- 30% – First full-time engineer

Target close: soon → fund sprint to June 1 hard launch

Team

Michael Oliver - Founder & Lead Architect, deep open-source & AI orchestration. 55+ Years in software at all levels from Programmer to CTO.

Ringo Rivera – Head Software Developer, 20+ years, Author of our PolySysMon.
